

Ferox Treatment

June 07, 2012

Endorsement Letter

When Ferox was introduced to us by M/s ENERGY solar & more, we were under the impression that either it may harm our engines or it may not give us fuel economy. After assurance given by M/s ENERGY solar & more about the harmless performance of the Ferox Technology, we started treating our "HINO-75KVA H-07D-C with Ferox and observed its behavior for two months. We noted that emissions are significantly reduced, 16% increase in KWH output, 11% reduction in fuel consumption and 21% reduction in per unit cost.

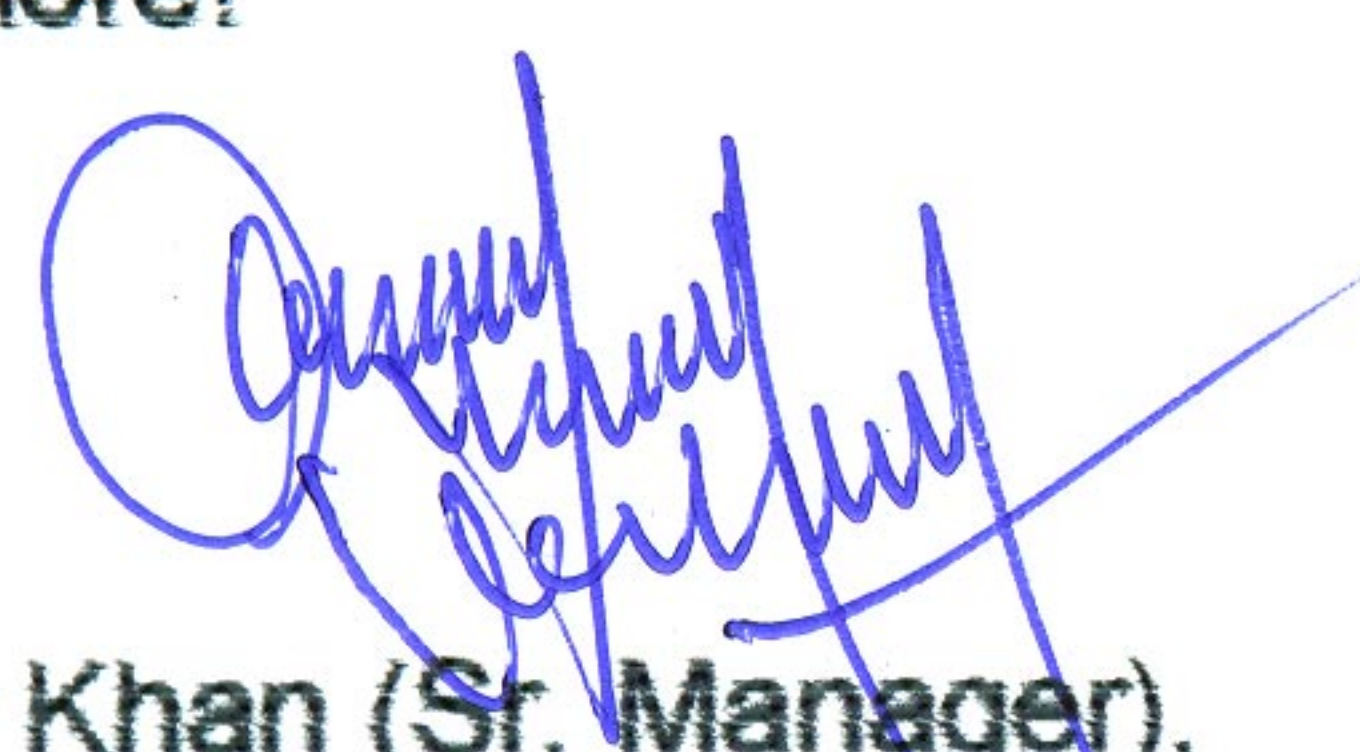

After verification of above results by our auditors and consultation with maintenance company, The management of ARY Digital Network has decided to treat the whole reservoir of 500 Gallons of diesel and started applying Ferox Treatment on remaining Generators of following makes and models:

- CUMMINS 316KVA, Model: NT-855 G6
- YANMAR 150KVA, Model: 6-HAC-T
- HINO 75KVA Model: H-07D-C
- DENYO 50KVA, Model: DCA-60 SPH
- DENYO 35KVA, Model: DCA-45 SPT
- PARKINS 24KVA, Model: HPW-30

During the six months continuous application of Ferox it was also noted that Engine oil of generators is required to be changed less frequently and generators are running smoothly hence the repair & maintenance cost is also reduced significantly. No breakdown has been faced during the application period as Ferox is serving the purpose of preventive maintenance.

Our Generators maintenance company has also observed the behavior of Generators minutely and recommended the continuous application of Ferox because they are getting their fixed retention fee periodically and visiting our site less frequently.

We are enjoying more than 20% saving on fuel cost, Thanks to Ferox and M/s ENERGY solar & more!

Arif Noor Khan (Sr. Manager),
Engineering Services & Utility Department,
ARY Films & Tv Productions.
