Subject: Endorsement Letter (TEKH Enterprises Inc.)

Bahrain Motors Company WLL is a leader in the construction industry in the Kingdom of Bahrain. Specializing in Infrastructure, Buildings, Earthworks & Curbing, Drainage & Water Supply, Landscaping & Irrigation, Road Construction and Earth Moving activities.

Due to the high volume of vehicles and equipment usage, fuel consumption is extremely high. In an effort to decrease the fuel consumption – **TEKH Enterprises Inc.** presented their technology "**DS-600i**" - that claims to decrease fuel consumption, as well as the harmful carbon output.

A period of two months was allotted to conduct a pilot on a 2017 CAT 700 Generator. The results of this pilot were extremely positive. **A savings of 6.7%** in fuel usage under normal operating condition. During 24-hour operating condition **a savings of 8.63%** in fuel usage was realized. Savings will also increase in time due to the maintenance decreasing.

Testing was also completed on multiple vehicles for the duration of two months, such as Cement Trucks and Pick-Up Trucks. All of which were positive and have seen a decrease in fuel usage.

No negative effects have occurred while using "DS-600i" to any equipment or vehicles.

Bahrain Motors Company WLL, strongly recommends the use of "DS-600i" for your operation.

Ali Ahmed Karimi
Vice President
