CERTIFICATE OF SOLE MANUFACTURER AND TECHNOLOGY UNIQUENESS
FEROX® Solid Combustion Catalyst Technology

To Whom It May Concern:

I, Thomas Parish, President and Chief Executive Officer of Rennsli Corp, hereby certify that Rennsli Corp is the owner and sole authorized manufacturer of FEROX® Fuel Tabs and the proprietary FEROX® solid-form combustion catalyst technology. FEROX technology represents the continuation of more than five decades of specialized chemical research, manufacturing, and combustion-catalyst development originating with Dr. W. Wesley Parish, founder of Parish Chemical Company. His scientific and industrial background included organic and organometallic chemistry and specialized chemical manufacturing for aerospace and energetic-material applications, including documented participation by Parish Chemical in the ATK/Thiokol supply chain.

This scientific and manufacturing foundation led to the development and commercialization of FEROX combustion catalyst technology by Parish Chemical during the 1980s. U.S. Environmental Protection Agency records document the registration of FEROX products under predecessor Ferox entities, including FEROX Fuel Tabs as a registered fuel additive.

The proprietary solid-form technology underlying FEROX Fuel Tabs was further protected by U.S. Patent No. 7,959,693 B2, "Combustion Catalyst Carriers and Methods of Using the Same," issued June 14, 2011. The patent identifies W. Wesley Parish and Michael D. Thompson as inventors and Ferox LLC as the original assignee, documenting the proprietary solid-form technology developed by the company.

Through corporate succession and assignment, the FEROX technology and associated intellectual-property rights are owned and controlled by Rennsli Corp. Rennsli Corp has never licensed or authorized an unrelated third-party manufacturer to independently manufacture its proprietary FEROX solid combustion catalyst technology.

Accordingly, Rennsli Corp certifies that genuine FEROX® Fuel Tabs and FEROX® solid combustion catalyst products originate exclusively through Rennsli Corp's authorized manufacturing operations and may be purchased only directly from Rennsli Corp or through suppliers expressly authorized by Rennsli Corp. Authorization to distribute, market, or resell FEROX does not convey any right to manufacture, reproduce, formulate, sublicense, or otherwise produce Rennsli Corp's proprietary technology.

Based upon this documented history, Rennsli Corp certifies that FEROX® represents a uniquely established proprietary solid-form combustion catalyst technology. Rennsli Corp is not aware of any other commercially established solid-form combustion catalyst technology possessing a comparable combined history of scientific development, U.S. EPA fuel-additive registration, international patent protection, continuous proprietary manufacturing, and long-term commercial application. This combination of technology development, intellectual property, manufacturing knowledge, regulatory history, and commercial heritage is unique to FEROX® and its predecessor technology.

This certification is provided for manufacturer verification, sole-source procurement, tender qualification, distributor authorization, governmental procurement, customs documentation, and commercial due diligence. Rennsli Corp will verify the authorization status of any supplier representing itself as a source of genuine FEROX products upon request.

Sincerely,

Thomas Parish

President & Chief Executive Officer
